Polynucleotide sequences AAF74187 - AAF74218 encode proteins AAB80608 - AAB80639, which impart environmental stress resistance. The invention relates to a method for identifying DNA encoding proteins imparting environmental stress resistance. The method comprises inserting cell, culturing the transformants under conditions in which the untransformed host does not grow well, and selecting for viable clones are resistance factors. The DNA encoding proteins of the resistance factors. The DNA encoding proteins conferring environmental stress resistance, can be used in the production of plants resistant to environments such as deserts, salt damaged ground, cold regions and the oceans. They can be used for increasing the area of land covered by ground.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a peptide linker used in the fusion proteins of the invention. The specification describes a method for improving pathogen resistance or tolerance of a plant. The method are capable of improving pathogen in the plant with a transgene encoding a expressed on their own. Specifically, two or more protein or domains that inhibitors are co-delivered, as a fusion, to Arabidopsis thaliana. The proteins or domains are connected by a peptide linker. The method is descendants, especially against parasitic nematode attack.

CC nucleic acid probes for measuring gene expression in a sample exon CC the probes with a collection of detectably labelled nucleic acid from mann breast and BT 474 cells. The method involves contacting CC derived from mann of detectably labelled nucleic acids CC derived from mann of his probes, and then measuring the label correct probe of the microarray. The probes are useful for CC expression of regions of genomic DAN predicted to CC expression analysis is useful for assessing the taxicity of chemical CC diversity of probes for measuring of this invention presents a far greater CC rapid production of functional information from genomic sequence. The cc probes of the control information from genomic sequence. The probe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                     XX

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Peptide #3707 encoded by human foetal liver single exon probe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      04-FEB-2002 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ABB36201;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               09-AUG-2001.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WO200157277-A2
                                                                                                                            The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, liver. The present sequence expression in samples derived from human measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ABB21577;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               congenital heart disease.
                                                                                                                                                                                                                                                                                 measuring human gene expression in a sample derived from human heart (set ABA21535-ABA41305). The present sequence is a protein encoded by one sucl ABA21535-ABA41305). The present sequence is a protein encoded by one sucl ABA21535-ABA41305). The present sequence is a protein encoded by one sucl probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease. human heart and vascular system e.g. cardiovascular disease. hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          26-MAY-2000; 2000US-0207456.

                                                                                                                                                                                                                                                                                                                                                                           The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of
                                                                                                                                                                                                                                                                                                                                                       Sequence

                                                                                                                                                                                                                                                                                                                                                      AAM17202;
                                                                                                                                                                                                                                                                                                                                                                        AAM17202 standard; Protein; 28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example 4; SEQ ID NO: 29675; 658pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human bone marrow -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (SENP: see AAI1068-AAI28459). The present sequence is a peptide encoder (SENP: see AAI1068-AAI28459). The present sequence is a peptide encoder by one such probe. The SENPs are derived from human HeLa cells. The SENI by one such probe as single exon microarray, which can be used for can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical measuring human gene expression, the probes are therefore epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably useful in grading and/or staging of diseases of the cervix.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                analyzing gene expression in human cervical epithelial cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human genome-derived single exon nucleic acid probes useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 27; SEQ ID No 22028; 487pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to human single exon nucleic acid probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              at ftp.wipo.int/pub/published_pct_sequences.

             The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    09-OCT-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAM04898;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        inflammatory disease; proliferative breast disease; non-carcinoma tumour.
                                                                                             The present invention relates to novel single exon nucleic acid probes (see AA100010-AA110067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in such probes t sample, where the probe hypridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, stading, monitoring and prognosing predicting, diagnosing, grading, stading those diseases with polygenic diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, actiology. The diseases of the breast, fibrocystic changes, proliferative breast disease and non-carcinoma tumours.

In the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO as the form the proper action.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         29-JAN-2001; 2001WO-US00661.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       09-AUG-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WO200157270-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                        04-OCT-2000; 2000GB-0024263.

     nucleic acid expressed in the human lung; measuring gene expression in a collection of detectably labeled nucleic acids derived from human lung, comprising (a) contacting the array with mRNA, and (b) measuring the label detectably bound to each probe of the array; identifying exons in a eukaryotic genome, comprising of the array; identifying exons in a eukaryotic genome, comprising of the eukaryote; and (b) detecting at least one exon from genomic sequences labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, in the above mentioned microarray; assigning exons to a single exon probe, in the above mentioned microarray; assigning exons to a single gene, above and (b) measuring the expression of each of the exons in several tissues and/or cell types method the probes is included.
tissues and/or cell types using hybridisation to a single exon
                                                                                                                                                                                                                                   probes. Also included are a microarray comprising the novel set of probes; the novel set of probes which hybridise at high stringency to a
                                                                                                                                                                                                                                                                          12614 nucleic acid sequences mentioned in the specification, or the complements or the 12387 open reading frames derived from the 12614
                                                                                                                                                                                                                                                                                                            The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of
                                                                                                                                                                                                                                                                                                                                                                                           Claim 27; SEQ ID No 28650; 634pp; English.

                                                                                                                                                                                                                                                                        The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  31-MAY-2002

                                                                                                                                                                                                     The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                      Claim 5; SEQ ID NO 100; 261pp + Sequence Listing; English

Plant Mol. Biol. 25:877-886(1994).

-!- FUNCTION: METALLOTHIONEINS HAVE A HIGH CONTENT OF CYSTEINE RESIDUES THAT BIND VARIOUS HEAVY METALS.

-!- DEVELOPMENTAL STAGE: HIGHLY EXPRESSED IN YOUNG FRUIT WITH REDUCED EXPRESSION IN THE LATER STAGES OF FRUIT DEVELOPMENT.

-!- SIMILARITY: BELONGS TO THE METALLOTHIONEIN SUPERFAMILY; FAMILY 15.

The present invention describes an isolated barley aba45 promoter (I) comprising a 649 (ABA03924) or 587 (ABA03925) base pair sequence (I) a vector comprising (I) to 587 of ABA03925) base pair sequence (also comprising (I); (2) an isolated nucleic acid comprising the nucleic acids; and (4) a vector comprising the nucleic acids; and (4) a vector comprising a comprising the nucleic acids; and (4) a vector comprising a comprising the nucleic acids; and (4) a vector comprising the nucleic acids; and (4) a vector comprising the nucleic acids; and (4) a vector comprising the comprision of a vector comprision of a vector comprision of a vector comprision of a composition of a cost-effective means of decreasing hydrolytic enzymes in rice tissues of animal farming. Supplementation of hydrolytic enzymes in rice tissues in the composition of a cost-effective means of decreasing the environmental composition.
                                                                                                                                                                                                                                                                                                           New barley promoter sequence useful for expressing heterologous tissues to provide a cost-effective means of decreasing environmental impact of animal farming.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                N-PSDB; ABA03926.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Liu J, Cheng K, Chen T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (SINI-) ACAD SINICA.

The present invention describes substantially purified human proteins of the red to as open reading frame, ORFX, where X is 1-11491 (see Table 1) reteins specification). ANNISTOS to ANNISTOS encode the human ORFX of sources in happologic to ANDISTOS encode the human ORFX proteins are useful for syndrome associated with ORFX proteins are useful for squences can be used in gene the therapy. ORFX proteins are useful for treatment of cancer, hyperproliferative disorder. ORFX polynucleotide of psoriasis, benign tumours, kaloid, degenerative disorders, cirrhosis of liver transplantation, cardiovascular diseases, diabetes mellitus, hemorrhage, the stranger of steps arythematosus, hypertension, hypothyroidss, disorders, haemorrhage, crange disease, various immune deficiencies and disorders, infectious

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      diseases, autoimmune disorders such as multiple sclerosis, rheumatoid arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune inflammatory eye disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis, bone degenerative disorders, or periodontal disease, and for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues and conditions resulting from systemic cytokine damage.
                                                                         useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLG1840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

   Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA0825-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell differentiation activities; stem cell growth factor activity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  myeloid cell disorder; lymphoid cell disorder; asthma; arthritis; chronic inflammatory condition; proliferative retinopathy; atherosclerosis; coronary heart disease; arterial isohaemia; bone disorder; osteoporosis; vascular growth disorder; tissue regeneration; wound healing; infection; immune disorder; cell culture; drug screening; gene therapy; antiinflammatory; antiasthmatic; antiarthritic; haemostatic; antiarteriosclerotic; cytostatic; osteopathic; vasotropic; cardiant; virucide; antibacterial;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cc thrombolytic activities; receptor or ligand activities; or may be convolved in oncogenesis, cancer cell proliferation or metastasis.

Cc Depending on their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical cc conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell cd disorders), chronic inflammatory conditions (e.g., asthma or arthritis), cc proliferative retinopathy, atherosclerosis, coronary heart disease, cc arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal cc vascular growth. Polypeptides involved with tissue regeneration and crepair (or nucleic acids encoding them) may be used to promote wound concern the conditions and ulcers), while those with cc pacterial and fungal infections and ulcers), while those with cc pacterial and fungal infections in addition to immune disorders.

Cc promote cell growth. For example, such polypeptides may be used to promote cells of the used to augment or replace cells damaged by illness, cancerial acidsease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug corporated of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                           The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, haematopoiesis regulating activity and may be useful in the diagnosis and/or inflammation cancer, leukaemia, nervous system disorders, arthrifis and
                                             Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AA013603

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            04-FEB-2002 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        АВВЗ9729;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            09-AUG-2001.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a single exon nucleic acid probe for leasuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, neasuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly format from the contract of the contrac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 04-FEB-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             30-JAN-2001; 2001WO-US00669.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WO200157276-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       03-AUG-2000;
21-SEP-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                   probes which are derived from genomic sequences expressed in the human probes which are derived from genomic sequences expression in bone marrow bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2001-488900/53.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ABG42939 standard; Peptide; 49 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                           19-AUG-2002 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                           ABG42939;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

                                                                                                                                                                                                                                                                                                                                  ρy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to isolated polynucleotide (I) and CD polypeptide (II) sequences. (I) is useful as hybridisation probes, CD polymerase chain reaction (PCR) primers, oligomers, and for chromosome CD polynucleotides are also used in diagnostics as expressed sequence tags CD polynucleotides are also used in diagnostics as expressed sequence tags CD for identifying expressed genes. (I) is useful in gene therapy techniques CD for identifying expressed genes. (I) is useful in gene therapy techniques CD for identifying expressed genes. (I) as useful in gene therapy techniques CD for restore normal activity of (II) or to treat disease states involving CD for restore normal activity of (II) are useful in arkers and as CD food supplement. (II) and its binding partners are useful in medical CD imaging of sites expressing (II). (I) and (II) are useful for treating CD disorders involving aberrant protein expression or biological activity. CD The polypeptide and polynucleotide sequences have applications in CD classocies, forensics, gene mapping, identification of mutations cannot be produced to the treats of other traits to assess biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/jpublished_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity -

                                                                                                                                     The present sequence represents a peptide linker used in the fusion proteins of the invention. The specification describes a method for improving pathogen resistance or tolerance of a plant. The method comprises transformation of the plant with a transgene encoding a fusion protein which comprises two or more protein or domains that are capable of improving pathogen resistance or tolerance when expressed on their own. Specifically, two distinct proteinase inhibitors are co-delivered, as a fusion, to Arabidopsis thaliana. The proteins or domains are connected by a peptide linker. The method is used to improve pathogen resistance or tolerance of a plant and its descendants, especially against parasitic nematode attack.
                                                                                                                                                                                                                                                                                                                  Claim 9;
